## Mushrooms, Mysteries & More...

### Let's begin with the More!

More equipment? Why not? Gene Wengert has written a tempting article about some options to consider after purchasing a sawmill. He focuses on three—a board edger, a resaw for cants, and a trim saw. Then, Tony Kryzanowski continues on the topic in his Sawmill Business column where he describes how upfront investment in accessories and equipment can open the door to new customers and expand business opportunities. And to sharpen the focus even more, Dave Boyt introduces us to Joe Nay who talks about his distinctive firewood business and why the Japa 365 Pro has been the ideal fit.

Taking a step back to Mushrooms and Mysteries, we're sure you'll enjoy Robbo Holleran's wonderful yarn called Mysteries in the Forest, where Robbo covers everything from why forestry can be more complex than rocket science, to the animal residents, bird migrations, communication among trees, and burls, bird's eye, and curly maple. It's fun and instructive commentary.

If you get hungry while reading the other articles, Phillip Meeks has once again taken care of that. He probably tickled your palate with his article on Tree Syrup in the previous issue, and in this one, he entices us with ways to grow Mushrooms in the Woodlot using log cultivation. Amazing!

We hope you'll enjoy the whole package—the articles, the mysteries, and the mushrooms.

Kilns for lumber, pallets & firewood

## Small lumber kiln

- 9000-21000bf capacity (modular up to 30000bf)
- Industrial kiln design and structure
- Gas heating hot water using wood waste
- Power venting with heat recovery
- Full featured computerized controls
- Optional wood MC% meter with 6 MC points
- Dual controls for DRY/HT setup

## Firewood kiln

- Wood waste or gas heat
- Easily meets 160F/75mins
- Heat treat in 8-16 hours
- Kiln dries green firewood in 1-2 days
- 6 cord (MiniQuick) up to 24 cord (Traditional)

MiniQuick firewood kiln has been specifically designed to dry and HT firewood quickly and efficiently
